

*"I want to express my gratitude to you and all of the staff at MOMA Architecture for the role you are playing in the BP Amoco re-image program. Though there are many challenges and lots of 'opportunities' presented, the Bovis Lend Lease Global Alliance team continues to receive top level performance from MOMA. As a result of all the staff efforts at MOMA, the BP Southeast Business Unit has received international recognition for a job well done".*

*John B. Desselle  
Design & Permit Manager  
BP Global Alliance*

In August of 2000, MOMA Architecture was selected as one of three Architecture firms to assist the BP Global Alliance with BP/Amoco re-imaging activities relative to the Southeast United States. Our selection to this elite team was based on our ability to work as an integral team member and generate cost effective construction details, which could be mass produced. It was also important to have the capability to roll-out extensive quantities of projects within a compressed time frame.

MOMA's responsibility involves assisting with document roll-out strategies, comprehensive detail design development, permit research, owner representation at design review boards/ zoning hearings and permit acquisition. To date MOMA Architecture is responsible for the successful re-image conversion of over 240 retail outlets in the North Georgia region.

It is an honor to assist this international integrated energy solutions provider in this program. Today, BP is the largest solar energy solutions company in the world. We invite you to explore their ongoing work at the following link:
